

1           ABSTRACT:

2           A hydrotherapy and exercise device is disclosed with integrated  
3 lift and treadmill means, having a tank for retaining fluid,  
4 treadmill means having driving means for rotating the treadmill and  
5 having at least one flexible linkage having two ends about which the  
6 linkage rotates, end lift means for lifting the treadmill and having  
7 at least two rigid supporting members pivotally connected at a pivot  
8 point wherein one end of the treadmill driving means rotates about  
9 the pivot point, and having remote control, electrically isolated  
10 microprocessor means for controlling the level of the treadmill,  
11 speed of the treadmill, flow rate of water and chemistry of the water  
12 in response to electrical information received from respective  
13 monitoring means.
